Investment Objective

The Fortunate Worldwide Equity objective is to provide long-term growth in capital across the global equity universe. The manager in selecting securities for the portfolio will seek to follow an investment policy which will secure for investors a flexible combination of investments in international and local equity, and property markets.

The underlying risk and return objectives may vary as the portfolio is aggressively managed with assets being shifted between the various international markets to reflect changing economic and market conditions to maximise total returns. The portfolio may also include participatory interests or any other form of participation in portfolios of collective investment schemes or other similar schemes.

In the event that specific collective investment schemes in securities (unit trusts) are mentioned please refer to the relevant fact sheet in order to obtain all the necessary information in regard to that unit trust

Collective Investment Schemes in Securities (CIS) are generally medium to long-term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. CIS are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commissions is available on request from the company/scheme. Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used.
